

The background is a vibrant, abstract graphic. It features a central bright white light source from which numerous colorful rays emanate, creating a sunburst or starburst effect. The rays transition through a spectrum of colors including yellow, orange, red, and various shades of blue and green. Overlaid on this are several large, semi-transparent, wavy shapes in similar color tones, giving the overall image a sense of motion and energy.

Interconnect Solution for Ethernet VPN (EVPN) Overlay Networks

Abstract

This document describes how Network Virtualization Overlays (NVOs) can be connected to a Wide Area Network (WAN) in order to extend the Layer 2 connectivity required for some tenants. The solution analyzes the interaction between NVO networks running Ethernet Virtual Private Networks (EVPNs) and other Layer 2 VPN (L2VPN) technologies used in the WAN, such as Virtual Private LAN Services (VPLSs), VPLS extensions for Provider Backbone Bridging (PBB-VPLS), EVPN, or PBB-EVPN. It also describes how the existing technical specifications apply to the interconnection and extends the EVPN procedures needed in some cases. In particular, this document describes how EVPN routes are processed on Gateways (GWs) that interconnect EVPN-Overlay and EVPN-MPLS networks, as well as the Interconnect Ethernet Segment (I-ES), to provide multihoming. This document also describes the use of the Unknown MAC Route (UMR) to avoid issues of a Media Access Control (MAC) scale on Data Center Network Virtualization Edge (NVE) devices.

Status of This Memo

This is an Internet Standards Track document.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Further information on Internet Standards is available in [Section 2 of RFC 7941](#).

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at <https://www.rfc-editor.org/info/rfc9014>.

Multi-Site Solution for Ethernet VPN (EVPN) Overlay draft-sharma-bess-multi-site-evpn-02

Abstract

This document describes the procedures for interconnecting two or more Network Virtualization Overlays (NVOs) via NVO over IP-only network. The solution interconnects Ethernet VPN network by using NVO with Ethernet VPN (EVPN) to facilitate the interconnect in a scalable fashion. The motivation is to support extension of Layer-2 and Layer-3, Unicast & Multicast, VPMs without having to rely on typical Data Center Interconnect (DCI) technologies like MPLS/VPLS. The requirements for the interconnect are similar to the ones specified in [RFC7209] "Requirements for Ethernet VPN (EVPN)". In particular, this document describes the difference of the Gateways (GWs) procedure and incremental functionality from [RFC9014] "Interconnect Solution for Ethernet VPN (EVPN) Overlay Networks", which this solution is interoperable to. This document updates and replaces all previous version of [SHARMA-MULTI-SITE].

Status of this Memo

This Internet-Draft is submitted to IETF in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at

Sharma, et al.

RFC9014 and Multi-Site – Side by Side

In a Nutshell

RFC 9014

- Base Standard for Interconnecting EVPN
- Defines the Layer-2 Stitching
- Two Gateway Model
- Multiple Encapsulations
- Leverages Overlay and Underlay ECMP

Multi-Site

- Extends RFC 9014 for Interconnecting EVPN
- Describes Layer-2 and Layer-3 Stitching
- Single Gateway Model (Two BGW* Model)
- Focus only on VXLAN Encapsulation
- Different ECMP model depending on BGW Model

*BGW – Border Gateway (BGW); Cisco's name for the VXLAN EVPN to VXLAN EVPN Gateway

Use Cases

Use Case #1 - Compartmentalization

- Multiple Fabrics, single Data Center
 - Single or Multiple Data Halls
 - Within a Geographic Locations
- Control at BGW (Border Gateway)
 - Allows Extension of Layer-2
 - Allows Extension of Layer-3
 - Allows Extension of Layer-2 and Layer-3
 - Allows Traffic Control (BUM*)
 - Defines VNI allocation and stitching
 - Optimizes BUM* Replication

BUM Optimization

Use Case #1 – Compartmentalization

Single Fabric BUM with Ingress Replication

Single BUM Packet, 5x Replicated

3 Replication over DC Core / Super Spine (Between)
2 Replication for Fabric #1 (Local)

Multi-Site BUM with Ingress Replication

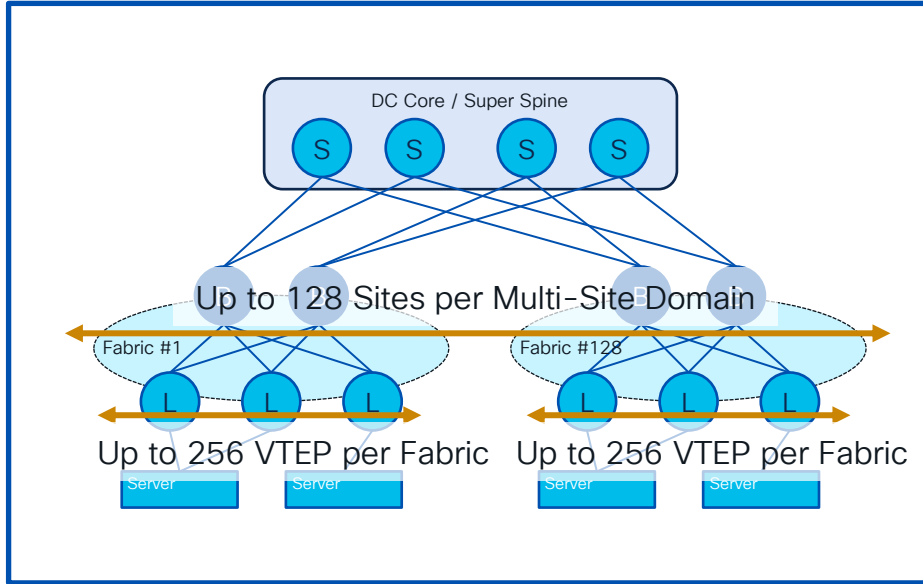

Single BUM Packet, 3x Replicated

1 Replication over DC Core / Super Spine (Between)
3 Replication for Fabric #1 (Local)
3 Replication for Fabric #2 (Local)

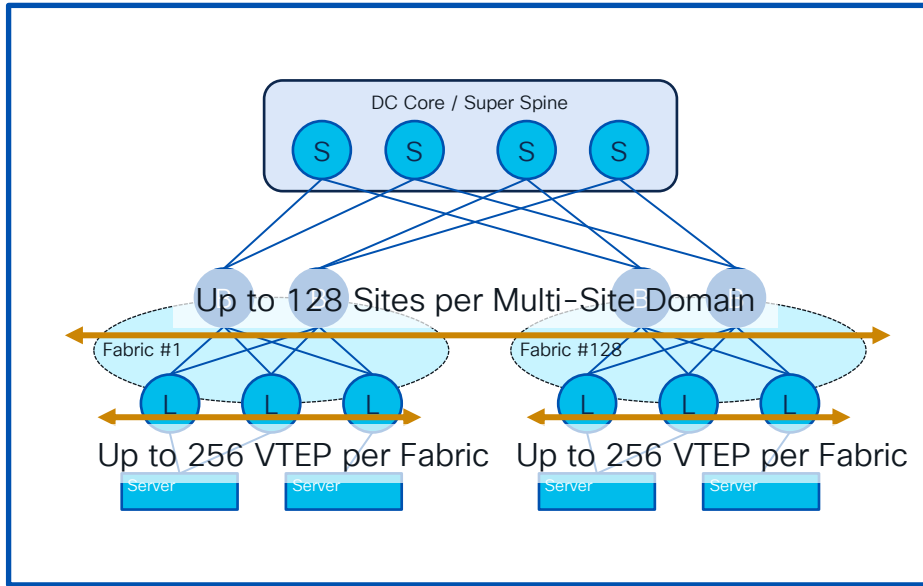

*BUM – Broadcast, Unknown Unicast, Multicast

Use Case #2 - Scale

- Multiple Fabrics , single or multiple Data Center
 - Single or Multiple Data Halls
 - Within or between Geographic Locations
- Control at BGW (Border Gateway)
 - Reduces Remote VTEP Count
 - Expands VTEP scale
- Scale through Hierarchy
 - Multiply VTEP with Sites

Use Case #2 - Scale

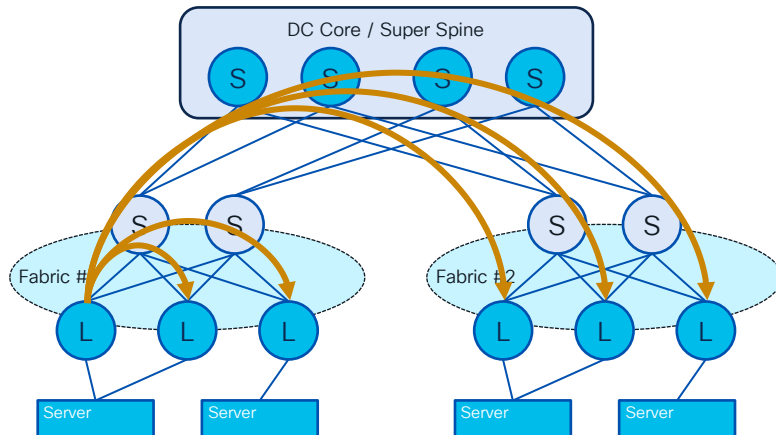

- Multiple Fabrics , single or multiple Data Center
 - Single or Multiple Data Halls
 - Within or between Geographic Locations
- Control at BGW (Border Gateway)
 - Reduces Remote VTEP Count
 - Expands VTEP scale
- Scale through Hierarchy
 - Multiply VTEP with Sites

32'768 VTEP to extend Layer-2 or/and Layer-3 segments to

VTEP Scale

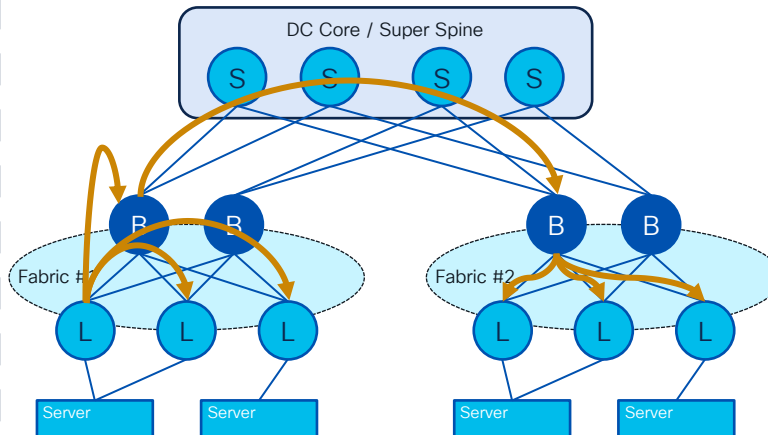

Use Case #2 - Scale

Single Fabric or Multi-POD

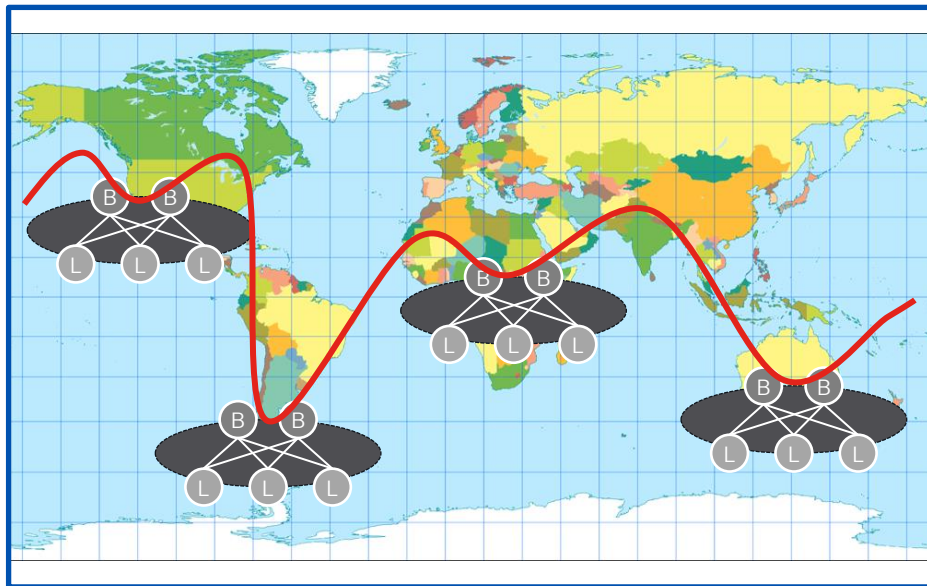

Leaf #1 sees every VTEP, 5 VTEP Peer
3 VTEP Peer for Fabric #2 (Between)
2 VTEP Peer for Fabric #1 (Local)

Multiple Fabric with Multi-Site

Leaf #1 sees only local VTEP, 3 VTEP Peer
1 VTEP Peer for Exit, BGW (Between)
2 VTEP Peer for Fabric #1 (Local)

Use Case #3 – Data Center Interconnect (DCI)

- Multiple Fabrics, Geographically Dispersed
- Classic DCI Use Case
 - Allows Extension of Layer-2
 - Allows Extension of Layer-3
 - Allows Extension of Layer-2 and Layer-3
 - Allows Traffic Control (BUM*)
 - Defines VNI allocation and stitching
 - Optimizes BUM* Replication

Use Case #3 – Data Center Interconnect (DCI)

- Multiple Fabrics, Geographically Dispersed
- Classic DCI Use Case
 - Allows Extension of Layer-2
 - Allows Extension of Layer-3
 - Allows Extension of Layer-2 and Layer-3
 - Allows Traffic Control (BUM*)
 - Defines VNI allocation and stitching
 - Optimizes BUM* Replication

Works Within a Geographic Location – Works Between Geographic Locations

Use Case #4 – Integration with Legacy Networks

- Integrating Fabrics with Legacy Networks
 - BGW Frontends Legacy Network
 - BGW Frontends New Network
- Host Mobility and Migration
 - Provides Distributed Default Gateway
 - Allows Layer-2 Extension where needed
- Benefits from all Multi-Site functions
 - Layer-2, Layer-3 Multicast and Unicast VPNs between different Networks for Migration or Co-Existence

Use Case #5 – Hybrid Cloud Connectivity

- Extending from On-Prem to Public Cloud
 - Using BGW to terminate VXLAN EVPN Tunnel from Cloud
 - Transported via Internet or Direct Connect / Express Route
 - Encryption Optional (IPSec)
- Multi-Tenancy to the Cloud
 - Extends Layer-3 with VRF awareness
 - Multiple On-Prem VRF mapped or integrated with Virtual Cloud Instances (ie VPC or VNET)
- Leveraging Cisco Cloud Router
 - C8kv (Catalyst 8000 Virtual) in the Cloud as termination point
 - Replacing CSR1000v

Multi-Site A Deeper Look

As we Talk about Scale

Hardware Support

Minimum Hardware and Software Requirements for BGW (Border Gateway)

Cisco Nexus Hardware	Cisco Nexus 9300 EX platform Cisco Nexus 9300 FX platform Cisco Nexus 9300 FX2 platform Cisco Nexus 9300 FX3 platform Cisco Nexus 9300 GX platform Cisco Nexus 9300 GX2 platform Cisco Nexus 9364C platform Cisco Nexus 9332C platform Cisco Nexus 9500 platform with X9700-EX line card Cisco Nexus 9500 platform with X9700-FX line card Cisco Nexus 9500 platform with X9700-GX line card
Cisco Nexus Software (NX-OS)	Cisco NX-OS Software Release 7.0(3)I7(1) or later*

*Check for Hardware Specific Support Releases

As we Talk about Scale

Scalability Values as of NX-OS 10.2(3)F

Multi-Site Scale

Number of Sites	128
Number of BGW per Site	6
Number of VTEP per Site (internal)	256

Border Gateway (BGW) Scale	EX	FX2	FX,FX3,GX,GX2	N9364C & N9332C
Number of Layer-2 VNI (VLAN)	3900			
Number of Layer-3 VNI (VRF)	2000			
MAC per BGW	92k			
IPv4 Host Routes per BGW*	450k	450k	1.1M	96k
IPv4 Network Routes per BGW*	450k	450k	1.1M	8k
IPv6 Host Routes per BGW*	24k	260k	620k	48k
IPv6 Network Routes per BGW*	200k	290k	620k	2k

*The values provided in these tables focus on the scalability of one particular Route scale at a time

Some Notes on BGW and VXLAN Tunnels

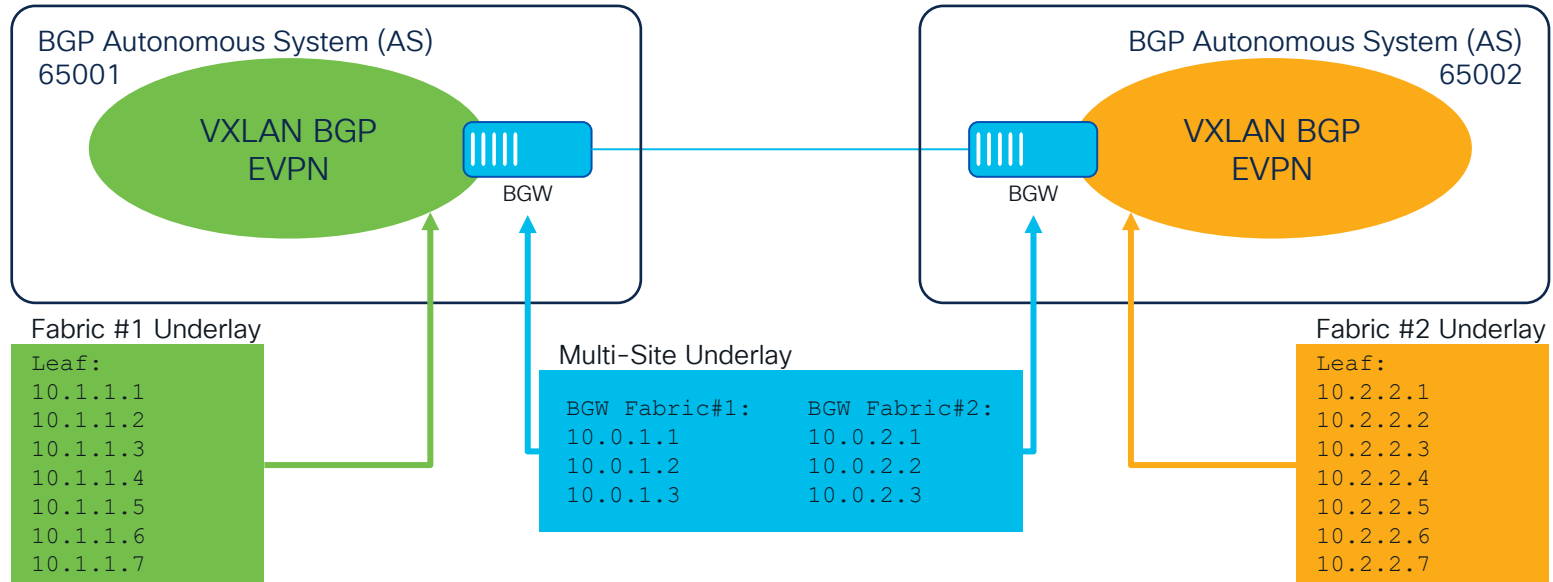

Multi-Site

- Tunnels are Stitched at the BGW (Border Gateway)
- Intra Fabric Tunnel goes from Leaf to Leaf or Leaf to BGW
- Inter Fabric Tunnel goes from BGW to BGW

Some Notes on the Interconnect and Underlay Multi-Site

- Fabric #1 Underlay (VTEP, Point-2-Point, Loopback etc) is not aware of Fabric #2
- Each Fabric maintains their Unique Network Topology, Protocols and IP Addressing
- Only BGW IP Addressing must be Unique and Aligned between Sites

Border Gateway Deployment Considerations

Multi-Site – A Deeper Look

Border Gateways Deployment Considerations

Anycast Border Gateway

vPC Border Gateway

- Border Gateways used for two main functions:
 - Interconnecting each site to the Inter-Site network (for East-West traffic flows)
 - Connecting each site to the external Layer 3 domain (for North-South traffic flows)
 - May also be used to connect endpoints and/or network service nodes (FWs, ADCs)
- Possible deployment models:
 - Anycast Border Gateways
 - vPC Border Gateways
- BGW function enablement in the VXLAN EVPN fabric:
 - BGWs on Leaf node (Border Gateway Leaf)
 - BGWs on Spine node (Border Gateway Spine)

Anycast Border Gateway

Anycast Border Gateway

- Up to 6 Border Gateways
- Border Gateway
 - Deploying as a Leaf node – 7.0(3)I7(1)
 - Deploying as a Spine node – 7.0(3)I7(2)
- Two Mode of Operation:
 - Can Operate as Multi-Site Anycast BGW with VIP
 - Focuses on Scale and Convergence
 - Using Virtual IP (VIP) for Tunnel Stitching
 - Uses Overlay ECMP
 - Can Operate in RFC 9014 BGW Mode with PIP
 - Focuses on 3rd Party Interop
 - Using Primary IP (PIP) for Tunnel Stitching
 - Uses Underlay and Overlay ECMP

vPC Border Gateway

vPC Border Gateway

- Up to 2 Border Gateways
- Border Gateway
 - Deploying as a Leaf node – 9.2(1)
- Common Use Case
 - Legacy Network Integration or Migration
 - Provides Multi-Chassis Link Aggregation
 - Integrates with Ethernet and FabricPath
 - Hosts the Distributed Anycast Gateway
 - Attachment of Network Services
 - Dual-Attachment of Firewalls and ADCs
 - Acts like a vPC when it comes to Routing

When to use what BGW

Anycast Border Gateway

- Up to 6 BGW
 - Shared Nothing
 - Simple Failure Scenarios
- Any Deployments
 - No End-Point or Network Services Connectivity on BGW
- Greenfield Deployments

vPC Border Gateway

- 2 BGW with physical vPC Peer-Link
- Small Deployments
 - End-Point or Network Services Connectivity on BGW
- Migration Use-Cases (Brownfield)
 - Classic Ethernet/FabricPath to VXLAN EVPN

Details on the Different BGW

- Both Anycast and vPC Border Gateway needs to be configured with a common Multi-Site VIP address and an individual Primary IP (PIP) address
- vPC Border Gateways share a secondary IP address to be used as vPC virtual IP (vPC VIP)

Anycast Border Gateway

vPC Border Gateway

Control and Data Plane

Multi-Site – A Deeper Look

Control- and Data-Plane

- MP-eBGP EVPN for between Multiple Sites
- Leverages Natural BGP Next-hop behavior
 - VXLAN tunnel termination and re-origination
 - Loop protection (as-path attribute)
- Full mesh of MP-eBGP EVPN adjacencies between sites

Control- and Data-Plane

- Two main options for underlay and overlay Control-Plane (CP) deployment
 - I-E-I (Recommended)
 - Within Fabric: IGP (OSPF, IS-IS) as underlay CP, iBGP as overlay CP
 - E-E-E*
 - Within and Between Fabricis: eBGP for both underlay and overlay CPs

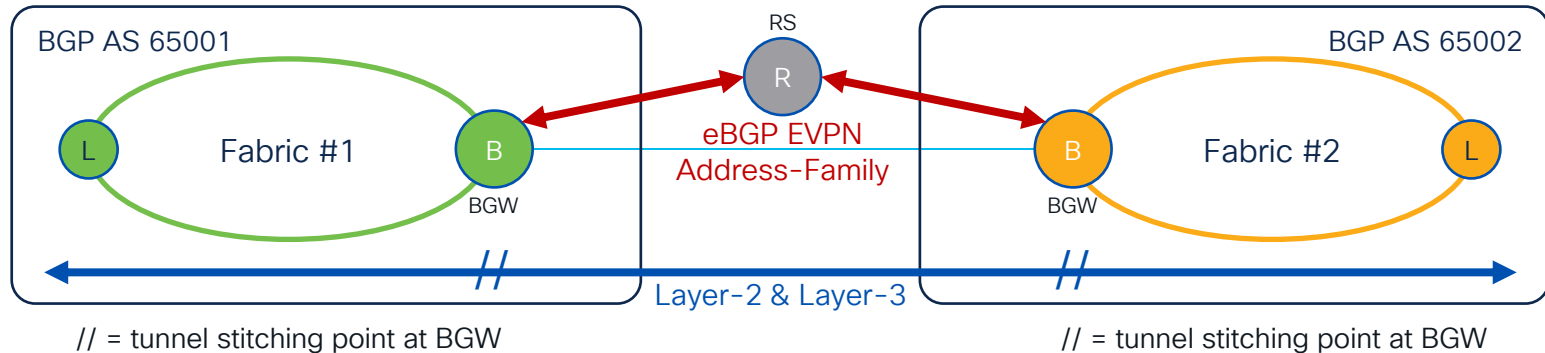

*For more information on why eBGP for both underlay and overlay CP is not a good idea:

https://learningnetwork.cisco.com/blogs/community_cafe/2017/10/17/the-magic-of-super-spines-and-rfc7938-with-overlays-guest-post

Control- and Data-Plane

- Full mesh of MP-eBGP EVPN adjacencies between sites
 - Recommended to deploy a couple of Route-Servers (RS) with 3 or more sites
- RS resides in a separate AS and only performs control plane functions
 - “eBGP Route-Reflectors”, IETF RFC 7947
- RS functions: EVPN routes reflection, next-hop-unchanged, route-target rewrite

Conclusion

Conclusion

#1

Border Gateway (BGW)

- A Gateway (GW) to stitch multiple VXLAN BGP EVPN domains
- Provides Control- and Data-Plane separation
- Extends Layer-2 and Layer-3 with Control
- Allows to Scale beyond any Fabric Scale
- Facilitates Multi-DC and Multi-Pod Use-Cases
- More than just a Data Center Interconnect (DCI)

#2

VXLAN BGP EVPN Multi-Site

- A Simple add or drop-in
- First introduced in September 2017 – proven and deployed
- A Solution combining EVPN DCI Overlay (RFC9014) and IPVPN-EVPN interworking (draft-ietf-evpn-ipvpn)
- Provides Layer-2 and Layer-3 extension
- Wide Hardware Support
- Flexible Deployment Option – Not just for VXLAN Fabrics

The background is a vibrant, abstract graphic. It features a central bright white light source from which numerous colorful rays emanate, creating a sunburst or starburst effect. The rays transition through a spectrum of colors including yellow, orange, red, and various shades of blue and green. Overlaid on this background are large, semi-transparent, wavy shapes in similar color tones, giving the overall image a sense of motion and energy.
